

Do you need another dose of the COVID-19 vaccine?

Additional doses of COVID-19 vaccines are now authorized for certain high-risk groups. Find out if this includes you.

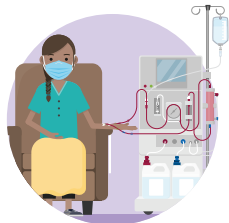

What you should know about additional COVID-19 shots:

- Only certain high-risk people are eligible to receive an additional dose of vaccine at this time. These are people who have specific conditions that weaken their immune systems.
- **Talk to your doctor to see if you are eligible for an additional dose.**
- Your care team can give you an additional vaccine dose with your doctor's approval. **DaVita can give the Pfizer vaccine to those who are eligible.**

If you do not qualify for an additional dose now, you might be eligible later. We will continue to keep you informed.

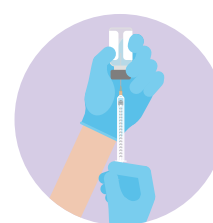

Continue to keep yourself safe from COVID-19:

Come to all of your dialysis appointments. Wear a mask when you are in the dialysis center.

Wear a mask indoors and in crowded spaces. Continue to physically distance.

If you have not done so already, get your COVID-19 vaccine. Vaccines are your best protection against getting sick from the virus.

Your safety and well-being continue to be a top priority. Questions? Ask your care team. We're here for you.
